

## FAST GENETICS HIRES HANNAH WILLSON AS GENETICIST

Fast Genetics is pleased to announce that Hannah Willson has been appointed as its newest Geneticist. She will be joining the Genetics and R&D team to support genetic services in the US and aid in the development of innovative tools for our genetic program. Hannah will be reporting to Dr. Daniela Grossi, our Manager of Genetics and Genetic Research.

Hannah completed her master's under the supervision of Dr. Luiz Brito at Purdue University. Her master's thesis was focused around the analysis of conventional carcass, novel carcass, meat quality and growth traits from Fast Genetics' terminal sire line.

Hannah received her undergraduate degree in Animal Science from Purdue University. After completing her undergraduate degree, she held the position of Genetic Supervisor for the Maschhoffs at a maternal nucleus farm. There she was responsible for recording and collecting data, attending weekly meetings, employee training, and any barn tasks that team leads needed assistance with. Working on-farm and being responsible for the genetic progress and accuracy of that farm gave her a new level of experience and interest in the data collection process. Soon after, she decided to continue her education in order to pursue a career as a geneticist in the swine industry.

Fast Genetics is very excited to welcome Hannah and believe that her experience, involvement, and education in the industry will most definitely be an asset for our customers and team.
